

NamazuContest 2023-2024

Episode 3 – RDV4

answers to

insight@geoazur.unice.fr

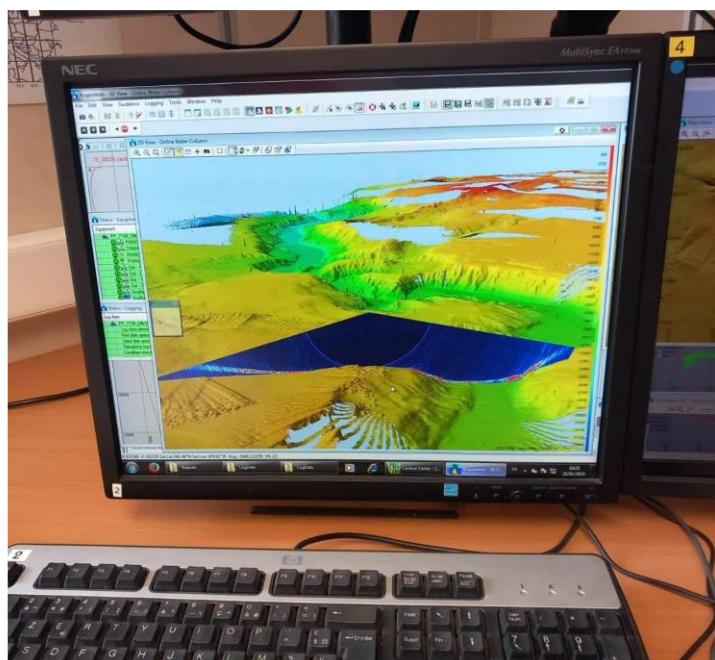

Level of difficulty

Submarine erosion at the Ecuadorian continental margin

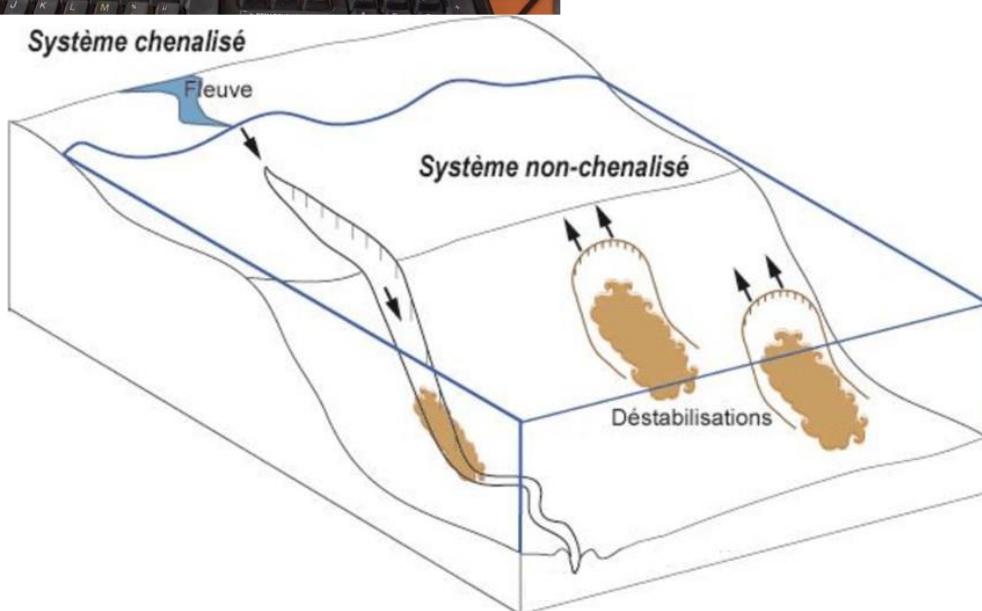

The deep-sea ship Why not? has on-board devices allowing it to carry out bathymetric surveys, that is to say topographic surveys of the underwater relief.

These tools notably enabled the scientists on board to map the underwater canyon of Esmeraldas.

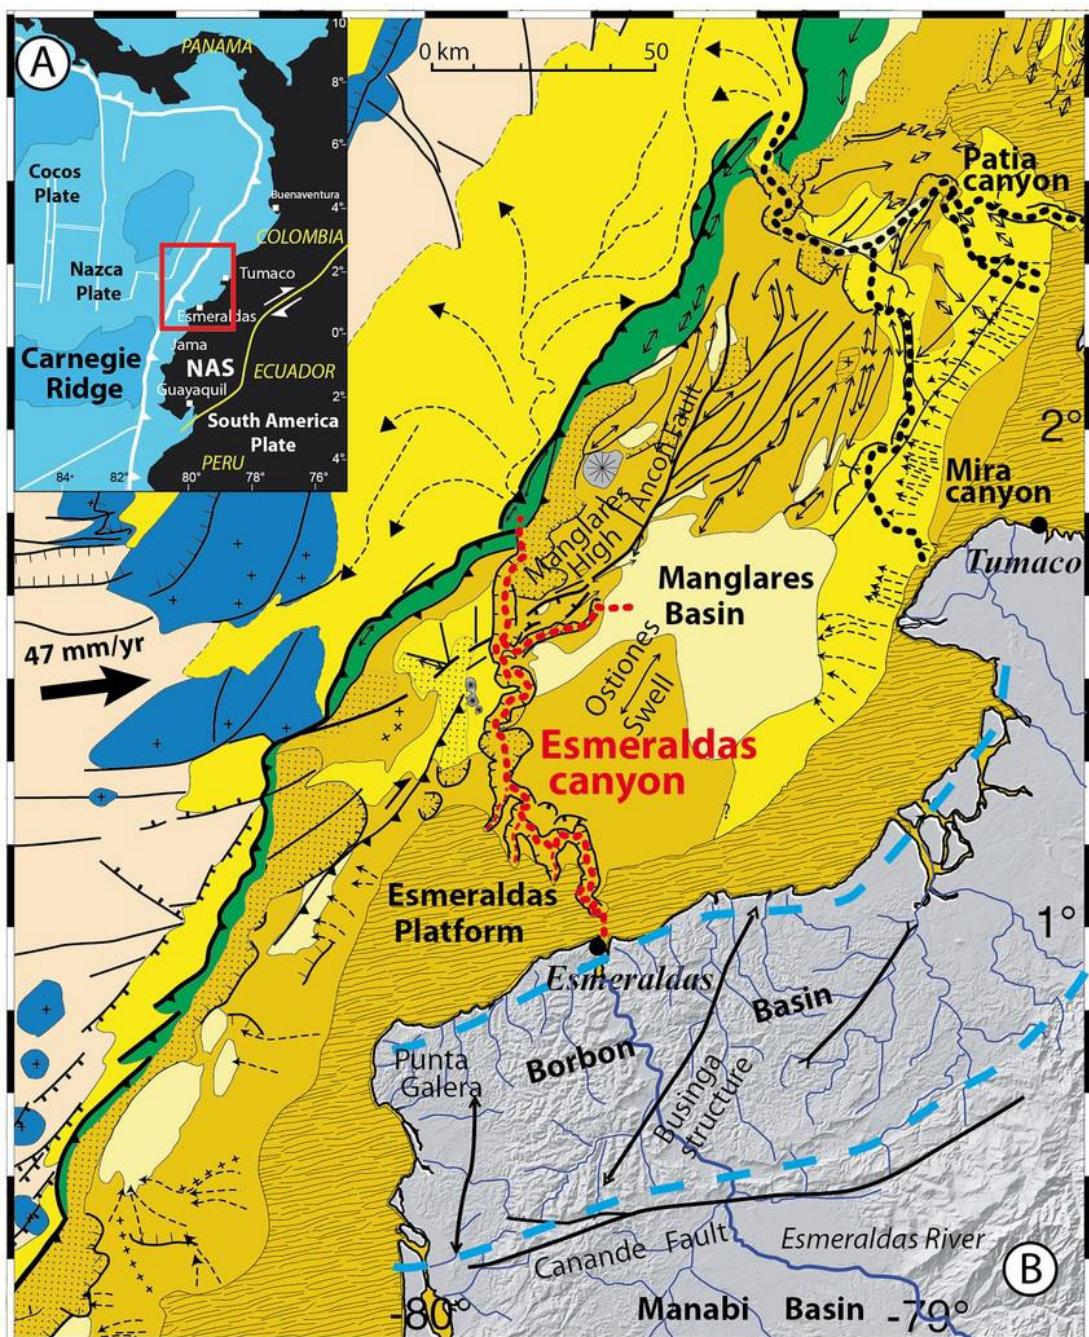

Screenshot of bathymetric surveys in the Esmeraldas submarine canyon sent by François Michaud, head of the SUPER-MOUV mission.

This underwater canyon, located near the epicenter of the 2016 Pedernales mega-earthquake, had already been mapped before the earthquake. The scientists wanted to check if, following this earthquake, the topography of the Esmeraldas canyon was modified.

Document 2: Diagram of two models of underwater canyon formation

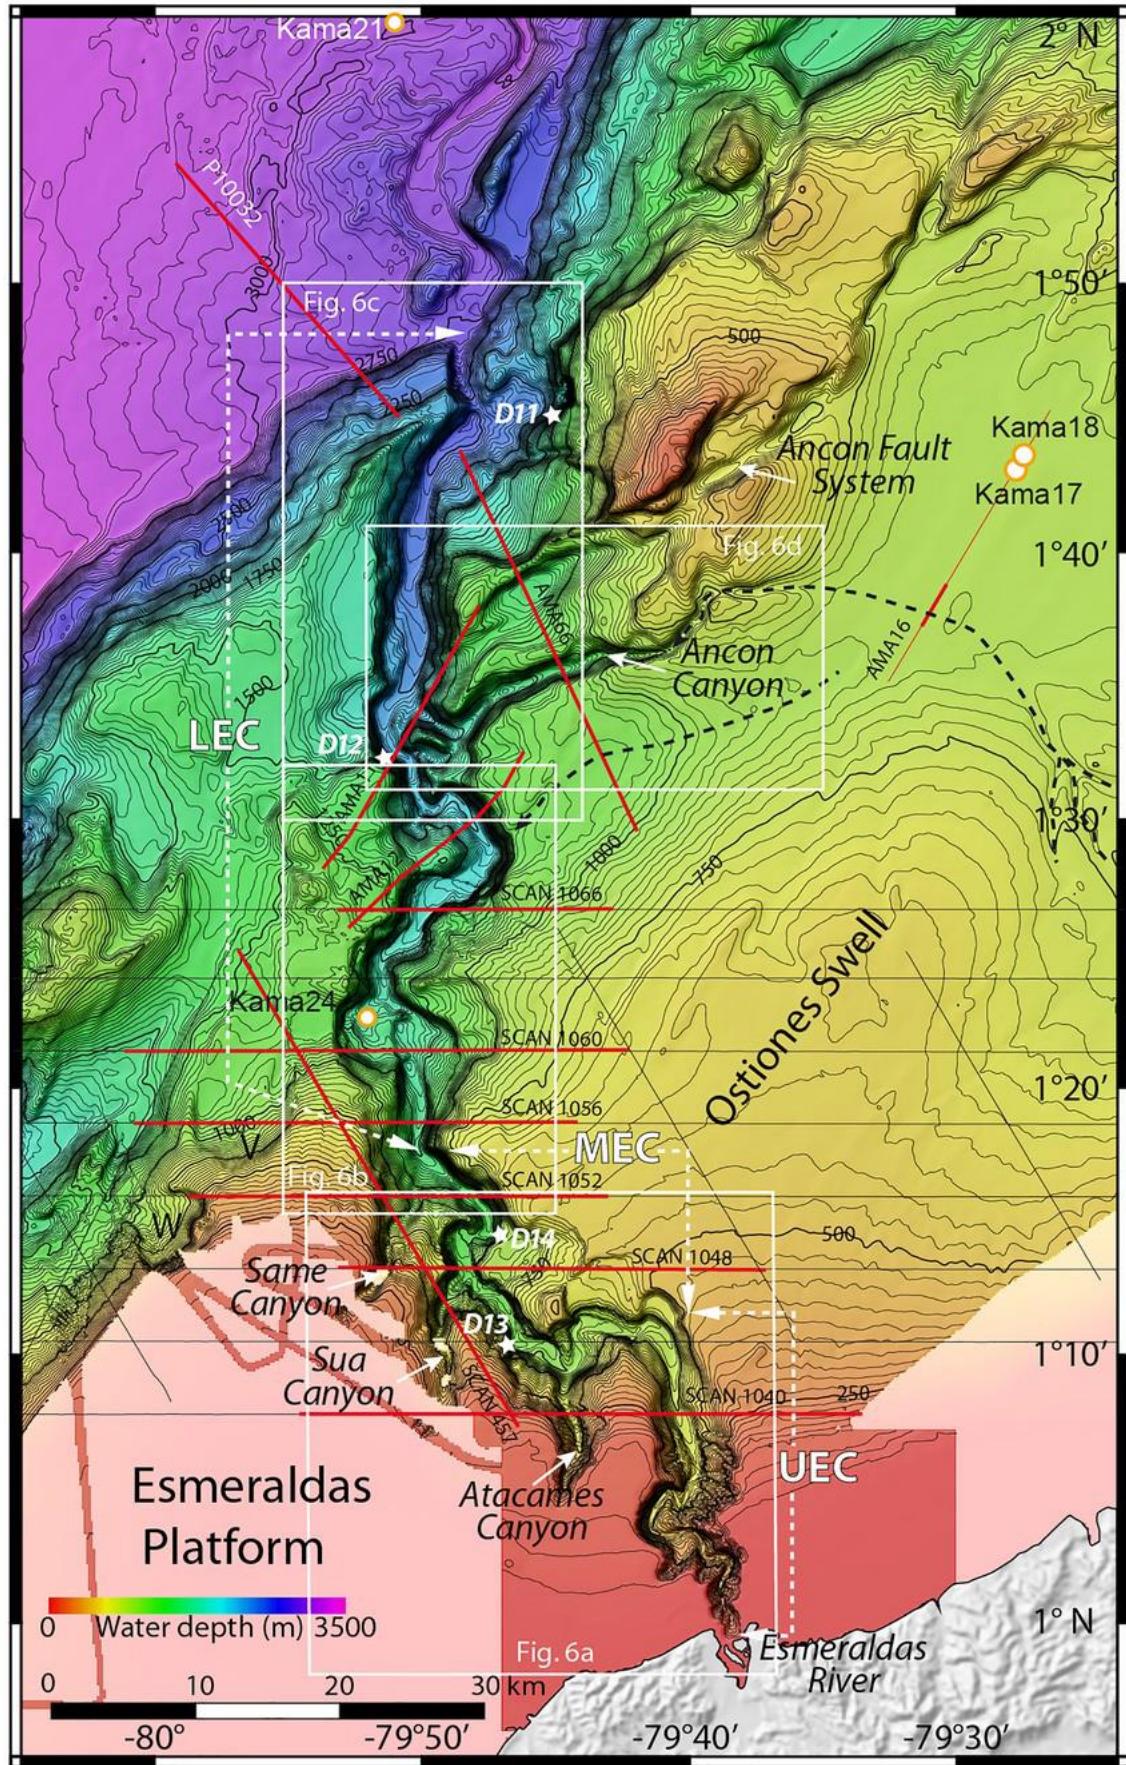

https://www.researchgate.net/figure/2-Deux-types-de-processus-impliques-dans-la-formation-descanyons-dans-un-systeme_fig2_337103180

- [Yellow square] Deformed Cenozoic Margin sediment
- [Light yellow square] Quaternary sedimentary basins
- [Yellow-green square] Quaternary trench and slope deposits
- [Green square] Plio (?) -Quaternary accretionary / frontal wedge
- [Diagonal hatching] Continental shelf
- [Dotted pattern] Slope Mass wasting deposits
- [Orange square] Hemipelagic sedimentary cover on Nazca plate
- [Blue square] Cenozoic (?) volcanic rocks and sediments
- [Black dashed arrow] Channels /Gullies
- [Crosses] Crests
- [Scallop line] Scarsps
- [Curved arrows] Deformation front/thrust, reverse faults
- [Dashed line] Normal faults/structural lineaments
- [Wavy line] Anticlines/synclines
- [Oval] Mud Diapir (?)

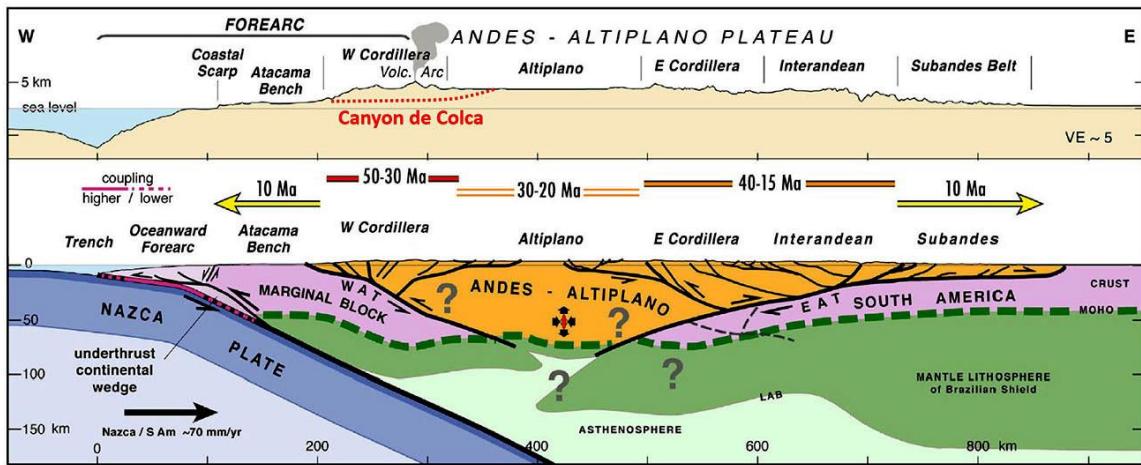

Document 3: Geological context of the Esmeraldas canyon

Junior level:

Determine, using arguments found in the proposed resources (documents 1 to 4), to which canyon model corresponds the submarine canyon of Esmeraldas located near the coast of Ecuador.

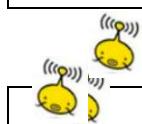

You can also rely on:

<https://earth.google.com/>

Intermediate level:

Using your knowledge and the resources provided (documents 1 to 7), explain the formation of the Esmeraldas underwater canyon.

Expert level:

Using a diagram(s), present the principle of bathymetry measurements carried out on board the Pourquoi pas?:

You can rely on:
